EDUCATION

Nanyang Technological University
Master of Science In Artificial Intelligence

Singapore
August 2026 - Present

The Hong Kong Polytechnic University
Bachelor of Science In Computer Science, Minor in Applied Mathematics; GPA: 3.28

Kowloon, Hong Kong SAR
August 2022 - July 2026

Raffles American High School
Higher Diploma; Cumulative GPA: 3.85

Malaysia, Johor Bahru
Sep 2019 - Jun 2022

OBJECTIVE

Aspiring AI engineer and software developer currently pursuing a Master of Science in Artificial Intelligence at Nanyang Technological University, with a strong foundation in computer science, applied mathematics, machine learning, and software development. Experienced in designing and developing AI-powered applications, particularly large language model (LLM)-based systems, through academic research, industry experience, and independent software projects. My recent work includes developing an AI-powered interactive storytelling system using local LLMs such as Llama and Qwen through Ollama, implementing long-term context management and multilingual functionality, and evaluating generated content using BERTScore alongside human user studies.

Beyond AI development, I have gained practical experience translating technical concepts into real-world applications. As a Research Assistant at The Hong Kong Polytechnic University, I contributed to the development and usability testing of an electronic patient-reported outcome system, working across application development, interface design, user research, and multidisciplinary collaboration. My industry experience as a software and web developer further strengthened my engineering foundation through the development of an ERP inventory management system using PHP and SQL, authentication and access-control mechanisms, QR-code-based tracking, and web applications.

With programming experience in Python, Java, C/C++, R, and SQL, as well as exposure to PyTorch, Flask, Ollama, LLM deployment, databases, and full-stack application development, I am seeking opportunities in artificial intelligence, machine learning, generative AI, LLM applications, or AI software engineering. I am particularly interested in developing reliable and practical intelligent systems that combine modern AI techniques with strong software engineering principles to solve meaningful real-world problems.

SKILLS

Languages: Python, Java, C, C++, R, SQL, Shell Programming, PHP

Software Tools: Figma(UI/UX Design), Adobe Premiere Pro, Adobe Photoshop, Unix/Linux, Git, HTML, Relational Databases, Microsoft, Ollama, CodeX, PyTorch

EXPERIENCE AND PROJECTS

Research Assistant

Jan 2025 – Aug 2025, Part-time

Fortunately advised by [Prof.Eileen CHENG](#)

School of Nursing, Hong Kong Polytechnic University

Research Project: "Development and Usability Testing of an Electronic Patient-Reported Outcome Measure System for Advanced Cancer Patients." Led the development of an electronic PRO measure system to collect critical health data from advanced cancer patients, including interviews with 20 patients, caregivers, and doctors.

Developing New Phone User Interface Using Figma for Advanced App Design. Designed a user-friendly interface for the PRO measure system using Figma, collaborating with multidisciplinary teams to create and test prototypes, which involved feedback sessions with 20 participants to ensure accessibility and usability.

Conducting User Interface Design into an Android and iOS App Using Flutter for Diagnosis of Advanced Cancer Patients. Developed a cross-platform mobile app enabling real-time symptom tracking and conducted usability testing with 10 patients to refine features, implementing secure data entry and background management to enhance patient-provider communication.

Programmer (Software/Website Developer)

Jul 2025 – Aug 2025, Full-time

Aerospace Shuwei (Suzhou) Equipment Technology Co., Ltd

Xian, China

The first technology innovation company in China to introduce the "drone+clean" model, specializing in the production and manufacturing of cleaning drones for high-altitude applications, including fishery-solar and agricultural-solar complementary photovoltaic power stations, glass curtain walls, and wind energy facilities.

Designed and developed a tailored ERP system for drone and spare parts inventory management, utilizing PHP and SQL, integrating WeChat-based authentication, implementing hierarchical access controls, and deploying a QR code-based tracking mechanism to enhance security, efficiency, and data integrity.

Built and launched the company's official website using HTML, organizing content into homepage, news, and product introduction sections, and incorporating multimedia elements to effectively communicate company offerings and achievements to clients and partners.

Collaborated with cross-functional teams and received mentorship from a doctoral researcher, strengthening both technical and interpersonal skills, and demonstrating adaptability in delivering practical software solutions to meet evolving organizational needs.

Capstone Project

Sep 2025 – Apr 2026

Supervised by [Prof. Li Amelia](#)

Department of Computing, The Hong Kong Polytechnic University

Capstone Project: Interactive Storytelling for Elderly-Friendly RPG Games

Developed a fully functional AI-powered interactive storytelling system tailored for elderly users, featuring calm, positive RPG-style narratives with simple multiple-choice decisions.

Designed and implemented an accessible dual-language (English & Chinese) web application with large fonts (18pt+), high-contrast UI, and slow-speed voice narration using gTTS for better senior usability.

Built the backend using Flask and local LLMs via Ollama (Llama 3.1:8b for English, Qwen2:7b for Chinese), incorporating a rolling history summary mechanism to maintain long-term story coherence.

Implemented three elderly-friendly themes (Peaceful Village Life, Romantic, Modern Living Life) with adjustable story length and per-story audio generation.

Conducted automatic evaluation using BERTScore (F1: 0.8422 English, 0.7691 Chinese) and human evaluation with 6 elderly participants through interviews and Likert-scale playtests.

Technology Beyond Borders: Service-Learning in Tanga Tanzania

Jan 2024 , Full-time

Workshop Facilitator

Participated in the service-learning program co-hosted by PolyU and Projekt Inspire in Tanga to promote STEM education and cultural exchange

Delivered two engaging classes of an Computing, AI and machine learning workshop for students in Tanga, ages 6-17, with 5-6 students per class.

Taught skills in Scratch, Teachable Machine, and introduced cultural knowledge such as Ba Duan Jin.

Showcased real-world applications and opportunities in these fields while incorporating cultural knowledge like Ba Duan Jin, promoting holistic development and cross-cultural understanding

PolyU Computer Science Course Projects

Dec 2022 – Present

A series of programming projects of PolyU COMP subjects
